DEMCO Gate Valves

Oklahoma City,
Okla., USA

Cameron is a leading provider of valves, valve automation, and measurement systems to the oil and gas industry. Our products are primarily used to control, direct, and measure the flow of oil and gas as it is moved to refineries, petrochemical plants, and industrial centers for processing.

We provide valve products that are sold through distributor networks worldwide for use in both oil and gas and industrial applications and include such widely recognized brands as DEMCO®, NAVCO®, NEWCO®, NUTRON®, THORNHILL CRAVER®, TECHNO™, TOM WHEATLEY®, WHEATLEY®, and WKM®.

Cameron's DEMCO gate valves are the valves of choice, engineered and proven for drilling and production industries. Designed for dependable, heavy-duty performance in abrasive and corrosive service conditions, DEMCO gate valves are commonly selected for a number of oilfield applications.

SERIES DM GATE VALVES

Cameron's DEMCO Series DM gate valves, the premier gate valve in the oil and gas drilling market, are specifically engineered for the rigorous requirements of oilfield applications. Designed for dependable, heavy-duty performance in abrasive service conditions, DEMCO DM gate valves are commonly selected for a number of oilfield applications, including:

- Drilling standpipe manifold
- Pump manifold block valves
- High-pressure mud mixing lines
- High-pressure drilling system block valves

The DEMCO Series DM gate valves are available in ASME Classes 400, 600, 900, and 1500. They also are available in API working pressures 2000, 3000, and 5000 psig (not API monogrammed).

Features and Benefits

In-Line Field Repairability

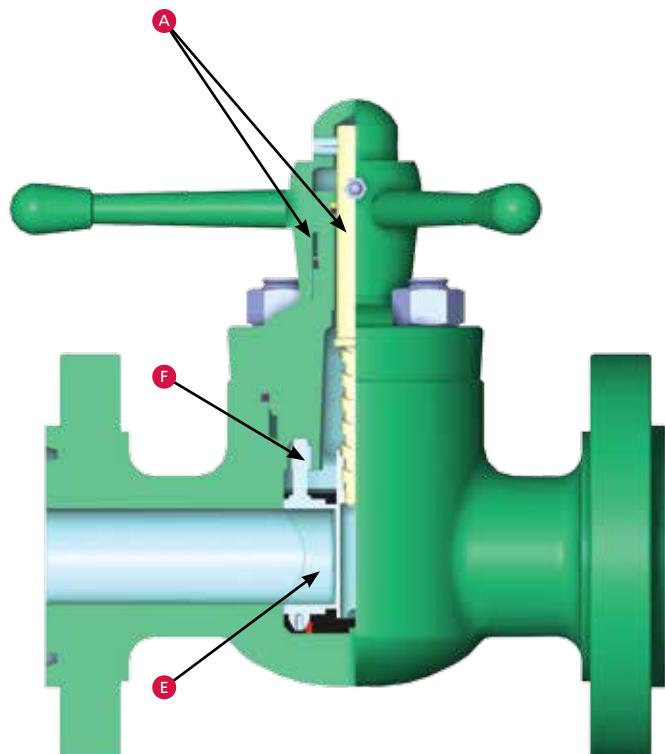

The bonnet is easily removed for internal parts inspection and/or replacement without removing the valve from the line. This design simplicity permits fast and easy service without the need for special tools.

Flexible Trim Offerings

Optional materials for stems, gates, seat inserts and seat elastomers make it easier to trim valves for a wide range of service conditions. Three internal plastic coatings for the body and bonnet are offered to improve resistance to wear and corrosion.

Double Acting Thread Design for Fast Operation

- A. The ASME series double acting thread design contains a threaded stem in the gate working with threads in the bonnet and handle assembly. Stems are polished and include a dependable O-ring and anti-extrusion seal. This unique design is economical and effective. Note: the 4" (100 mm) ASME Class 1500 valve is a double acting, rising stem design, similar to the 4" (100 mm) 3000 psi valve.
- B. The DM 2000, 3000, and 5000 psig working pressure valves contain double acting threads working together in a specially designed stem screw, screw housing, and stem arrangement. Note: the 4" (100 mm) and larger 5000 psi valve is a single-thread, heavy-duty, rising stem design with bearings.
- C. The rising stem design protects the stem threads from the lading.
- D. Larger DM 3000 and 5000 psi gate valves include a sight lens to view the stem for determining gate position.

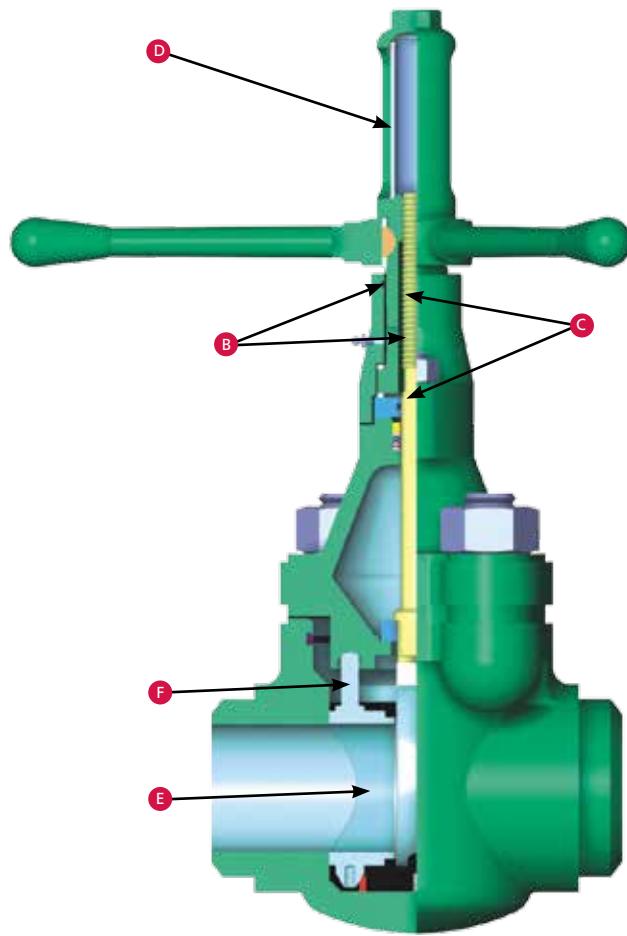

Series DM 3" (80 mm) ASME 900/1500
Gate Valve

SERIES DM 1000 TO 5000 PSI GATE VALVES

Exclusive Seat Design for Drop-Tight Sealing

The DEMCO Series DM gate valve seat uses a unique design to provide a drop-tight shutoff in abrasive and erosive service.

- E.** The seat consists of two identical metal wear rings encapsulated in elastomer to form a cylindrical shape with a gate slot and two round ports. The closed gate bears on the downstream wear ring, while the elastomer provides a drop-tight pressure-responsive seal around the port.
- F.** The cylindrical seat assembly fits into the machined body cavity and is expanded outward toward the valve ports by the bonnet and spread ring in the bottom of the seat. The expansion occurs when the bonnet is tightened onto the body while engaging the seat pin extensions from both wear rings. The spread ring ensures the seat elastomer presses uniformly against the body bore. This design ensures the seat seals tight against the body and around each valve port. This design has proven to be effective even if the gate and seat ring become scored or abraded during service. When it comes time for maintenance, the seat's single-piece design makes it easy to pull out of the body for replacement.

Series DM 4" (100 mm) 5000 WP
Gate Valve (Four-Bolt Design Shown)

For proper valve repair, use Cameron's DEMCO replacement parts.

SERIES DM 7500 PSI GATE VALVES

Features and Benefits

In-Line Field Repairability

The bonnet is easily removed for internal parts inspection and/or replacement without removing the valve from the line. This design simplicity permits fast and easy service without the need for special tools.

Heavy-Duty Roller Bearings

Heavy-duty stem roller bearings reduce torque on 4" (100 mm) and larger valves.

Floating Slab Gate Design

A slab gate with a "T" slot stem connection allows the gate to float to the seat, providing a tighter pressure-responsive seal.

A. Unique, abrasion resistant, one-piece seat design

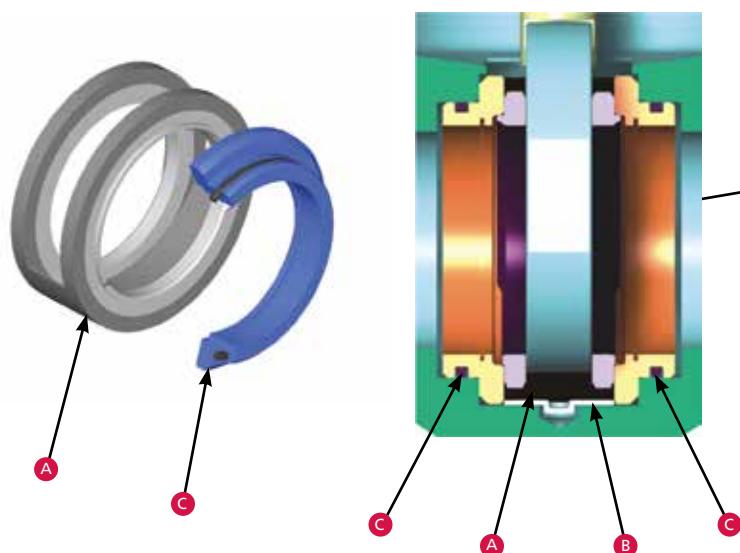

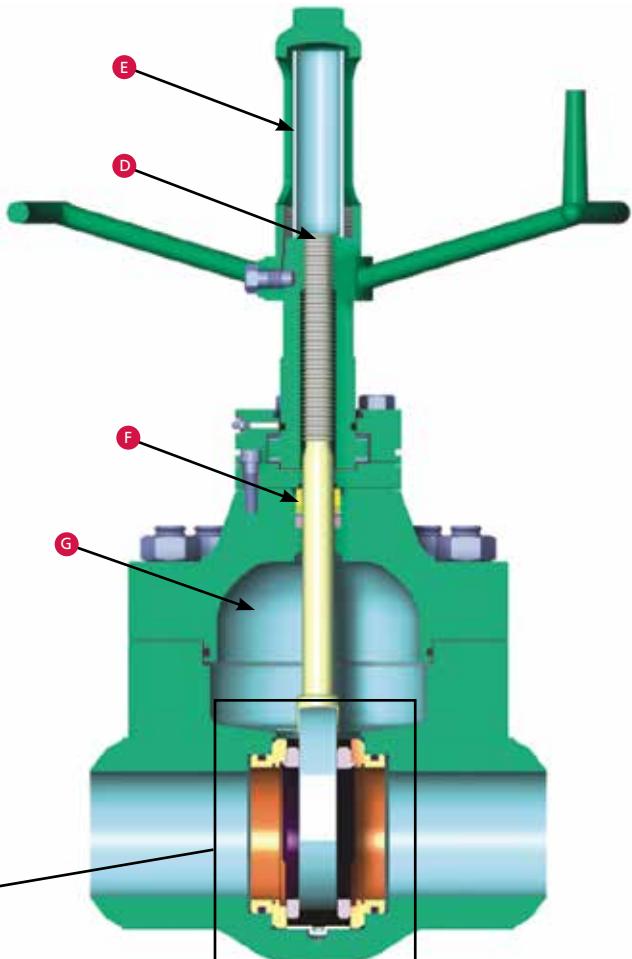

The seat assembly consists of two stainless steel insert support rings to which a resilient elastomer is permanently bonded. The elastomer provides tight shutoff after long use in abrasive service. The stainless steel rings are corrosion and erosion resistant. The one-piece design makes field replacement easier.

B. Locking seat alignment

The seat assembly is engineered with a metal lock shell that aligns the seat in the bottom of the valve. This design ensures accurate seat alignment with reduced resistance to flow.

C. Body wear rings

Surface hardened alloy body wear rings back up both sides of the seat. These rings extend the service life of the valve by absorbing erosive wear that can cause damage to the body around the seat bore area.

D. Rising stem design

The DEMCO DM 7500 gate valve uses a rising stem design that isolates and protects the threads from the line medium. The rising stem also indicates gate position.

E. Visual position indicator lens

On 3" (80 mm) and larger valves, a clear position indicator lens allows the operator to easily determine whether the valve is open or closed. The indicator lens also helps to protect the stem threads from the elements.

F. Replaceable stem packing

The stem packing can be replaced without removing the bonnet from the valve, 3" to 6" (80 mm to 150 mm), saving time when this maintenance may be required. Note: line and valve pressure must be relieved before performing this maintenance.

G. Flow cleansed design

The body cavity area is designed to allow continuous flushing by the fluid flow. This action prevents the valve from sanding up, even in standpipe installations.

* Other weld connections are available. Consult Cameron for information.

SERIES DT/DB GATE VALVES

Cameron's DEMCO Series DT/DB gate valves are recognized for their quality design, rugged dependability, and corrosion resistance, particularly for use in waterflood and CO₂ applications.

DEMCO aluminum bronze and stainless steel valves and accessories are designed specifically for the demanding requirements of corrosive CO₂ injection and waterflood applications in the enhanced oil recovery market.

- The handle moves up and down on the bonnet, or the top of the stem is visible during operation, providing visible aid to determine whether the valve is open or closed.

SEE PAGES 36 THROUGH 43 FOR MATERIAL SPECIFICATIONS

Optional Materials:

DT Series:

- SS Body and Bonnet,
FKM or P-10 Seats

DB Series:

- FKM Seat Elastomer
- Peroxide-Cured Buna-N

Features and Benefits

In-Line Field Repairability

The bonnet is easily removed for internal parts inspection and/or replacement without removing the valve from the line. This design simplicity permits fast and easy service without the need for special tools.

Corrosion-Resistant Materials are Standard

Body and bonnet materials, as well as all internal wetted parts, comply with NACE RP-0475.

Rising Stem Design

The handle moves up and down on the bonnet, or the top of the stem is visible during operation, providing visible aid to determine whether the valve is open or closed.

A. Pressure-responsive drop-tight sealing

Standard seats consist of 316 SS seat rings encapsulated with 90 durometer, peroxide-cured Buna-N elastomer to provide reliable, drop-tight sealing for extended service life.

B. Superior abrasion resistance

Buna-N elastomer encapsulated seats also provide an excellent deterrent to abrasion, further enhancing extended service life.

C. Four-ring stem packing set

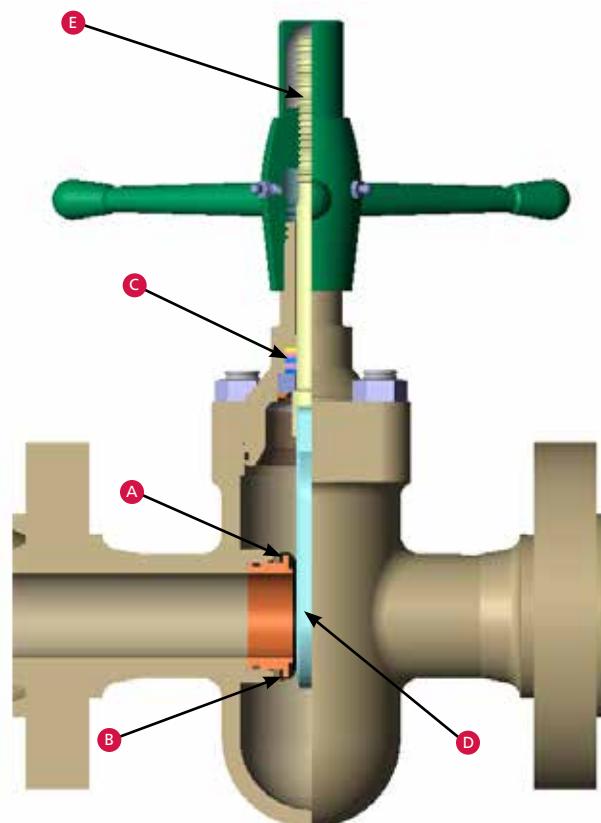

The DEMCO Series DT seal design uses four packing rings, preventing leakage into the stem journal and outside the valve.

D. Through-conduit gate design

Full through-conduit design ensures non-turbulent flow and gate alignment for improved valve performance and longer service life.

E. Non-wetted stem thread design

The DEMCO stem design isolates corrosive lading from contacting stem threads, preventing stem seizure and ensuring long, trouble-free valve performance.

Series DT Gate Valves

For proper valve repair, use Cameron's DEMCO replacement parts.

Series DB Gate Valve

The DEMCO Series DB gate valve is available for the large 6" (150 mm) and 8" (200 mm) pipe sizes in the enhanced oil recovery market. These valves also feature an aluminum bronze body and bonnet as standard. Internal parts are 316 SS. The exclusive seat design of the DEMCO Series DB gate valve is the same proven design found in the DEMCO Series DM gate valve. The seat consists of two identical metal wear rings encapsulated in elastomer to form a cylindrical shape with a gate slot and two round ports. The closed gate bears down on the downstream wear ring, while the elastomer provides a drop-tight pressure-responsive seal around the port. This design provides an effective seal even if the gate and seat ring become scored or abraded during service. The DEMCO Series DB gate valve also is field repairable while the valve is in-line.

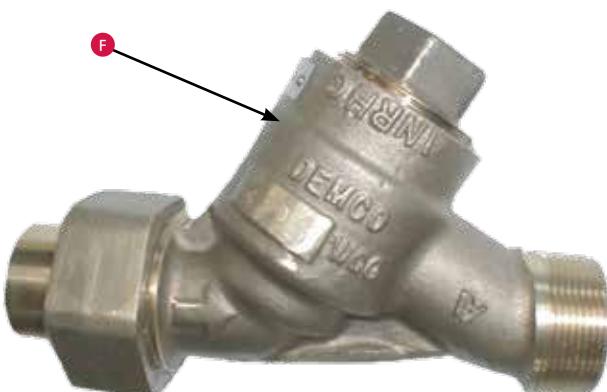

ENHANCED OIL RECOVERY ACCESSORIES

Accessories

Ball check valves, flow tees, and strainers are available to complete requirements for an entire injection assembly.

SERIES DM, DT, AND DB GATE VALVES GENERAL TECHNICAL INFORMATION

Valve Size Designations and Weld End Dimensional Information

1. All references to pipe size in this catalog are the nominal size.

The actual OD and ID for various nominal sizes and schedules are tabulated below.

Weld end bodies are machined at each end to match the pipe OD and ID.

Nominal Size			ID			
in.	(mm)	OD	Sch 40	Sch 80	Sch 160	XXH
1-1/2	(40)	1.900	1.610	1.500	-	-
2	(50)	2.375	2.067	1.939	1.687	1.503
2-1/2	(65)	2.875	2.469	2.323	2.125	1.771
3	(80)	3.500	3.068	2.900	2.624	2.300
4	(100)	4.500	4.026	3.826	3.438	3.152
5	(125)	5.563	-	4.813	4.313	4.063
6	(150)	6.625	6.065	5.761	5.187	4.897

2. Reduced port valve size descriptions are designated by two numbers.

The first number is the nominal size of the end connection.

The second number is the ID of the valve seat (dimension "C" in the tables).

PRESSURE RATINGS

DEMCO gate valves are designed for the maximum working pressures and test pressures tabulated below.

ASME Class 400	ASME Class 600	ASME Class 900	ASME Class 1500	1000	2000	3000	5000	7500
				WP	WP	WP	WP	WP
990 WP	1480 WP	2220 WP	3705 WP	1000 WP	2000 WP	3000 WP	5000 WP	7500 WP
1500 Test	2225 Test	3350 Test	5575 Test	2000 Test	4000 Test	6000 Test	7500 Test	11,250 Test

Gate valve rating must be selected to match the piping system in which the valve will be installed. Tabulated below are working pressures at 100° F (38° C) for ASTM A106 Grade B and AISI 4130 60K minimum yield pipe in sizes corresponding to DEMCO gate valves.

Size		ASTM A106 Grade B				4130 60k Min. Yield
in.	(mm)	Sch 40	Sch 80	Sch 160	XXH	XXH
1-1/2	(40)	1340	2430	-	-	-
2	(50)	1210	2220	4300	5970	10,234
2-1/2	(65)	1620	2590	3950	6590	-
3	(80)	1460	2370	3930	5880	10,080
4	(100)	1300	2130	3830	5150	8826
5	(125)	-	1970	3730	4650	7971
6	(150)	1110	1970	3650	4724	8098
8	(200)	1030	1790	-	-	-

Quality, Inspections and Testing

- Cameron's quality system is based on ISO 9000 and API Q1 requirements and is ISO 9001:2008 certified. Cameron's Quality department monitors all phases of valve production, from material receipt to final inspection, including a liaison with third-party inspectors and certifying authorities.
- All DEMCO gate valves are hydrostatically tested; stem seal, body and seat are inspected for zero leakage under pressure before being released for shipment. Hydrotest specifications are based upon API 6A latest edition testing requirements; DEMCO Series DM 7500 group 2 and 3 valves undergo additional test cycles, including low-pressure seat tests prior to being released for shipment.

Certifications

- DEMCO DM 5000 Gate Valves 2" to 5" are available with ABS Type approval upon request.
- DEMCO DM 7500 Gate Valves 2" to 5" are available with ABS or DNV Type approval upon request.

Seat Seal Options

- **Buna-N (Nitrile)**
Is excellent for petroleum oil and gases, fuel oils, and alcohols from -10° F to 200° F (-23° C to 93° C).
- **FKM**
Highly resistant to mineral acids and hydrocarbons and resists moderate concentrations of H₂S. Serviceable from -10° F to 400° F (-23° C to 204° C). (Not suitable for steam.)
- **HNBR**
Formulated for use with synthetic and oil-based drilling mud service from -20° F to 250° F (-29° C to 121° C).

Coatings – DM Gate Valves Only

- **DEMCO 12**
A baked-on phenolic epoxy, tougher and more abrasion resistant. Excellent for service in caustics and saltwater up to 200° F (93° C).
- **ENDURO-BOND™**
An engineered dry powder coating process for metal surfaces that provides a protective barrier against corrosion and abrasive wear. Coating thickness is from 1 to 4 mil; is superior to plastics, epoxies and ceramics; and has a high heat resistance to 800° F (427° C).

Ordering Information

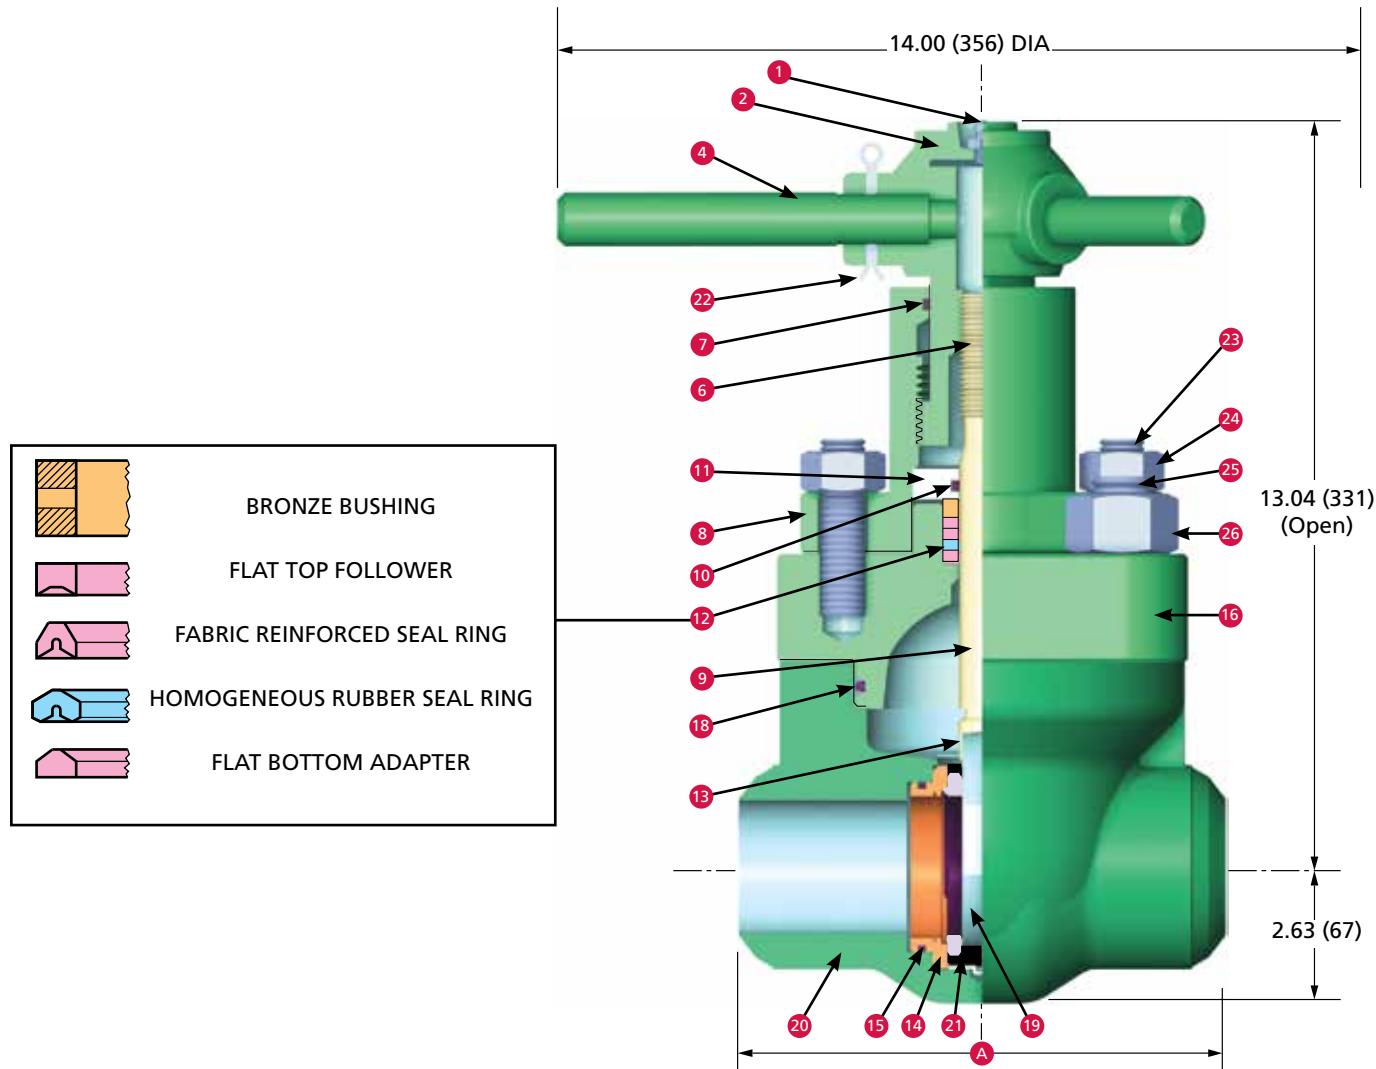

- Give size, pressure class, and end connection.
- Specify pressure class of flanged ends, raised face (RF), or ring type joint (RTJ).
- For threaded ends, provide type of pipe:

TBG (non-upset tubing)	LCSG (long casing thread)
UPTBG (external upset tubing)	CSG (short casing thread)
- For weld ends, give schedule of mating pipe.
- For applications in high-pressure gas above 3000 psi or involving concentrations of H₂S or CO₂, consult Cameron for recommendations.

Flange Bolts (Qty., Size: in.)	8 – 1
Number of Handle Turns from Open to Closed	16.01
Weight lb (kg)	
Weld End	256 (116)
Flanged End	372 (169)

ASSEMBLY PART NUMBER

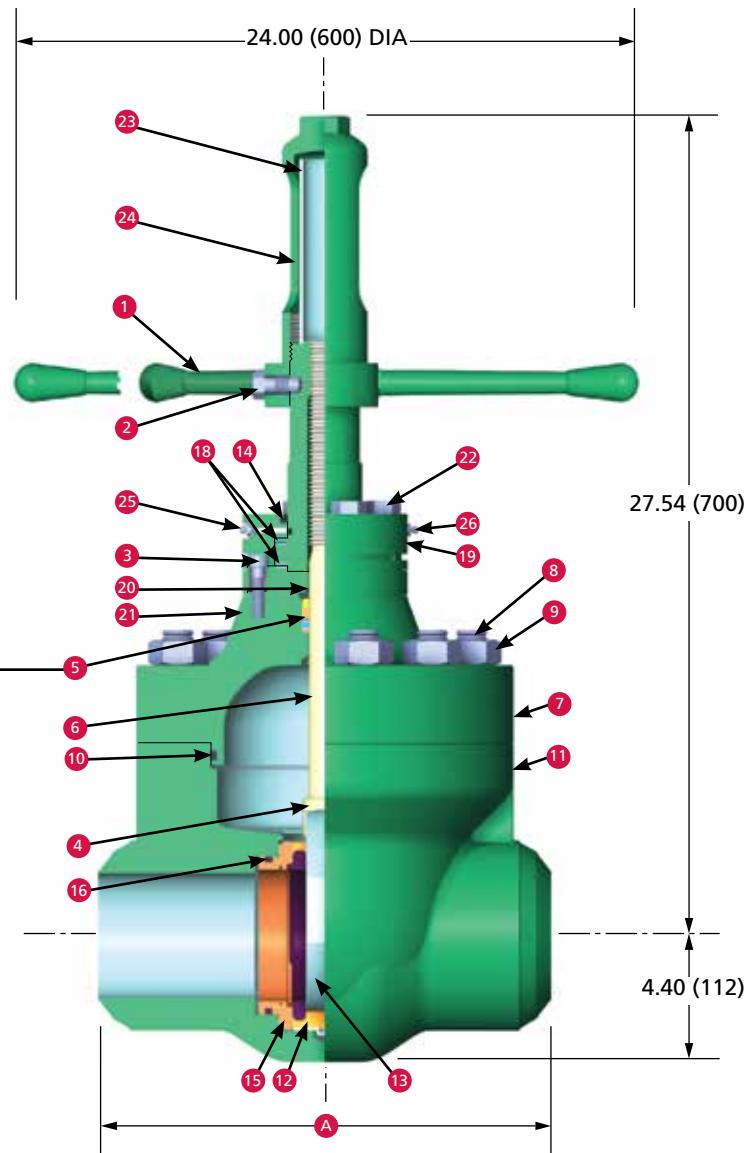

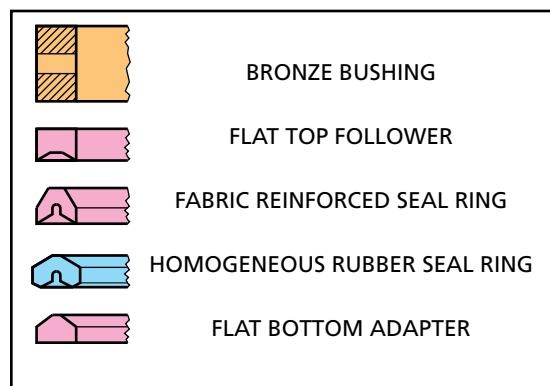

- Group 1** Basic valve. Hydrostatic shell test: 11,250 psi for three minutes. Hydrostatic seat test: 7500 psi for three minutes, each side. Material traceability on body and bonnet.
- Group 2** Same as Group 1, except: Hydrostatic shell test: 11,250 psi for three minutes, drop to 0 psi, then 11,250 psi for 15 minutes. Test is charted. Hydrostatic seat test: 7500 psi for three minutes, drop to 0 psi, 7500 for 15 minutes, drop to 0 psi, then 300 psi for five minutes, each side. Test is charted. Material traceability on body, bonnet, stem and bolting. Impact tests at or below -50° F (-46° C) on body, bonnet, stem, and bolting. Surface NDE on body, bonnet and stem.
- Group 3** Same as Group 2, plus volumetric NDE on body and bonnet.

CAMSERV Aftermarket Services for Valves and Actuation

WE BUILD IT. WE BACK IT.

Startup and Commissioning

Our experts understand that each project is unique. That's why Cameron's CAMSERV™ services help facilitate commissioning and start-up activities.

- Integrated solutions, onsite or at our global service centers
- Increased equipment and product performance
- The shortest possible trouble-free startup for your critical assets

Spare Parts and Asset Management

Cameron offers the assets and expertise to cover all aspects of valve management.

- Full inventory of quality exact OEM parts and spares
- Complete asset risk and criticality assessments
- Comprehensive inventory of your assets, including a complete recommended spare valves and parts list

Operational Support

Cameron's ability to address valve requirements in the field is a reflection of our commitment to life-of-asset support.

- Innovative asset management solutions
- Trouble-free installation, startup and operations
- Support from commission to operation – extending through all phases of a valve's life cycle
- Extensive inventory of spare valves and parts

Cameron's CAMSERV site management mitigates the risk of project delays by identifying issues in the construction process prior to valve installation to ensure valve integrity.
